# your robot gives you the lottery number (python language)

Here is a python script, which will give you the lottery numbers to play.

Last Updated: 1/17/2021

# (python language)

The program is planned for a draw of 5 numbers and a lucky number. (French lottery).
You will need to change the lottery program in your country.
here is the python code:

```
import random
def loto():
table1  = [(random.randint(1,49)), (random.randint(1,49)), (random.randint(1,49)),
(random.randint(1,49)),(random.randint(1,49))]
tablefin = []

doublon = []

for i in table1:
     if i not in tablefin:
         tablefin.append(i) #supprime les doublons
     else:
         doublon.append(i) #extraire les doublons
 d = len(doublon)
 while d > 0:
 #nouveau tirage
     doublon = []
     table1  = [(random.randint(1,49)), (random.randint(1,49)), (random.randint(1,49)),
(random.randint(1,49)),(random.randint(1,49))]
     # recherche doublon
     for i in table1:
         if i not in tablefin:
              tablefin.append(i) #supprime les doublons
         else:
             doublon.append(i) #extraire les doublons
         # si il existe doublon d+1 et vide la table
         if (len(doublon)==1)or(len(doublon)==2)or(len(doublon)==3)or(len(doublon)==4)or(len(
doublon)==5):
             talkBlocking("j ai trouver un doublon , je refais un tirage")
             d = d+1
             doublon =[]
         else:
             d = 0
         break
 # tri la table avant de la dire
 table1.sort()
 Audio.Say("Voci les numéros a jouer au loto .")
 Audio.Say("le "+str(table1[0]))
 Audio.Say("le "+str(table1[1]))
 Audio.Say("le "+str(table1[2]))
 Audio.Say("le "+str(table1[3]))
 Audio.Say("le "+str(table1[4]))
 Audio.Say("Et le numéro chance le, "+str(random.randint(1,9)))
 Audio.Say("Je vous souhaite bonne chance, ")

loto()
```

you will need to translate the sentences into the language of your country:
example:
Audio.Say ("Here are the numbers to play the lotto.")
if you won, think of me, thank you ...
note :
To make the EZROBOT micro-controller speak, replace Audio.Say by Audio.SayEZB .
If you are interested in pthon programs, I can give you more here.
